Document File Format (DFM) - A native format file format (Windows only) used by AutoCAD Crack Mac and AutoCAD LT. Stored Procedure - A series of programming statements that perform a specific series of actions. Typically used by programmers to perform calculations or other time-consuming operations. Unlike Database Transaction, Stored Procedures do not enforce atomicity. A Stored Procedure is a data manipulation language. Macro - A program that runs automatically at predefined times or intervals. A macro is typically written in the programming language of the user's choice (AutoCAD supports AutoLISP, Visual LISP, VBA,.NET and ObjectARX) and stored in a shared drawing database in a particular drawing. A macro is also referred to as a task. Ribbon - A part of a drawing window that contains icons and controls. Run - A set of commands that is processed by the AutoCAD application. The commands can be sent to a "run module" that takes care of the commands and executes them. Task - A group of commands that performs a specific set of operations and saves the current view. Task is also used as a verb that means "run a task". The ability to run and save the current view and schedule future runs is the hallmark of a modern CAD software. History In 1989, Autodesk and Intergraph released AutoLISP on the Macintosh to allow for CAD applications on the Macintosh to be created. The first CAD application created using AutoLISP was the 1989 Car and Truck Master CAD Add-on. AutoCAD was originally programmed in AutoLISP using EMCAD, the E-Mac Common Application Development Interface. Its creation is said to have started with a group of friends at the Hewlett-Packard Company in 1980, who had already created other application programming environments. In 1983, these friends began creating a common Application Development Interface to allow application development tools to be shared. The result was EMCAD. The first CAD application written for EMCAD was designed to build the structural steel trusses for the Pacific Bell Telephone Company Headquarters in Santa Clara, California. Its first commercial release, called AutoCAD 2D, was released in 1986. The first version was for the Macintosh and it used a 16-color display. The newest release of AutoCAD is version 2016 and it is also available for free on Windows and Mac. Autodesk changed the way AutoCAD is a1d647c40b
