Like many CAD programs, AutoCAD requires the user to prepare drawings in a drawing system. The user can create and edit drawings from scratch. However, AutoCAD has a pre-set drawing template ("schematic") which can be used to create an entire drawing. The user can use this drawing template and customize it for the specific drawings that are to be created. To start drawing a drawing, the user chooses the type of drawing. A drawing template is usually assigned by default, or the user can manually select one from the list of available drawing templates.
