TikiBench can be used to run a variety of tests including stock speed, running algorithms, memory speed, benchmarking/watt/efficient benchmarks, video card benchmarks and loading time. It offers a number of features such as specification tests and optional speed or performance graphs. On the downside, TikiBench only supports Windows Vista, 32-bit and 64-bit. In addition, there is no support for multiple monitors. Also, it lacks any user-friendly options or settings, so you 09e8f5149f
