Fontographer Product Key is a font editor that allows you to alter the shapes of characters or create entirely new designs. It's a full-featured, heavyweight design tool for creating hand-drawn, digital typefaces. You can use the software to quickly create a typeface from scratch, add or edit characters, or, for a more sophisticated experience, explore several creative design tools. The features include:

- * Create, modify, and arrange hand-drawn characters
- * Create type from vectors, paths, or bitmaps
- * Create glyphs from freehand sketches and vector paths
- * Display characters in various styles and sizes
- * Edit hints and kerning on selected characters
- * Apply optional styles, weights, and optical corrections
- * Save or export to various formats including TTF, OTF, PS, EPS, RTF,

and PAFB * Directly access fonts on your computer or import a font from a file or URL * Convert between point-based character format, Image-based text format, or True Type (.TTF) format

Fontographer Features: * Create, edit, and arrange hand-drawn characters You can import a library of more than 2,000 artists' glyphs to use as starting points for your font. Then edit characters, flip them, turn them around, and modify their colors and shapes. You can drag and drop, resize, change orientation, outline, or blur parts of a character to create new compositions. - Create type from vectors, paths, or bitmaps You can turn vector shapes into font characters. Select a vector (shape) file, a text-based path, or a bitmap, and transform it to be a glyph. Then you can combine or isolate the vectors or paths to make new designs. - Create glyphs from freehand sketches and vector paths Use the grid-based interface to draw out glyph shapes and select the areas that you want to retain. You can then export the design to a variety of formats including OTF, EPS, and TTF. - Display characters in various styles and sizes You can control the height and width of all the glyphs, select the font typeface you want to use, and make the text bold, italic, or bold and italic. You can adjust kerning, hinting, ligature formation, or optical quality. - Edit hints and kerning on selected characters You can determine the parameters of an existing character by viewing the Properties dialog box

Fontographer

Fontographer is the most complete type design and editing software available. Its sophisticated interface allows you to work fast and without fuss, to meet the demands of the most demanding business users. The program is packed with various features and utilities so you can create professional-quality typefaces and layouts at the touch of a button. Type design is done quickly and intuitively with the included Typeface Designer and Typeface Editor. Fontographer's precise type design features make it the only choice for creating typefaces for print and onscreen. Choose from thousands of built-in and user-contributed TrueType or OpenType fonts or make your own from its library. The program includes all the tools you need to create both display and text fonts, including kerning, setting up various size classes (hinting, actual size), maintaining an exact representation of the original source file, and much more. The Typeface Editor allows you to modify the original TrueType or OpenType font file to create your own typefaces. After you create your design, you can export it to standard formats or edit the file as you work. You can even change the file's base font to match that of the original, or change the spacing to suit your particular business needs. Many tools in Fontographer help you with adjustments that can be done with the cursor. Retouching, such as removing hair or furniture from a typeface and aligning the design with an image, is easy with the Retouch tool. Colorization and translucency effects, as well as the ability to add color to any part of the font, are available in the Makeovers tool. The Type and Display Types options allow you to modify a font's width or height, and the Layout Types option helps with the placement of type within a page. You can control what displays to the user and when each appears in relation to the others. You can also break layouts into multiple pages or display parts of the text. Metric tools help you to calculate things like leading and tracking, and you can use the advanced Text Import option to import text from a variety of applications, including Microsoft Word, WordPerfect, Notepad and Rich Text Format. Fontographer includes several script and language specific glyphs from over 5000 built-in fonts. Fontographer also includes a TypeRacer tool, which is a user-contributed library of TrueType fonts that consist of characters that are not included in other font formats. The program also includes a Vector font/webfont library. Fontographer
