If you're an amateur, you're probably wondering how Photoshop and Photoshop Elements compare. Photoshop is an all-in-one suite that includes tools for everything from photo editing to web design. Photoshop offers incredible range of tools for retouching images. It also includes tools for creating vector graphics for other applications, such as logos, icons, illustrations and animations. Elements, on the other hand, is best suited for basic photo editing, including retouching and basic image composition. It contains a number of basic tools for working with photos, including filters, adjustments and masking, as well as a drawing tool. Although Photoshop is the more complex software, many professional photographers and designers use Elements rather than Photoshop for basic image editing. For more in-depth editing of photos, work with graphics and web design, Photoshop remains the best option. Why you should use Photoshop Elements You can take advantage of a variety of powerful editing features including the following: The image editor Create your own PSD files, web graphics and more Create a scrapbook Easily manipulate photos Make

Here are some of the key features to be aware of: Elements Basics The essentials of Elements: Retouching, web design and graphics Elements only offers a single drawing tool, which makes it easy to draw text, shapes and lines. Liverpool outfit set to offer Mkhitaryan to PSG? Manchester United's interest in Henrikh Mkhitaryan has hit a new high after the Etihad's injury-hit star said he "wants" to join the Red Devils. Mkhitaryan has been in great form for the Red Devils in recent times with the 28-year-old netting a hat-trick against Tottenham at Old Trafford in the FA Cup semi-finals earlier this month. Reports claim Jurgen Klopp's Liverpool are now considering offloading the Premier League player to the French champions. Mkhitaryan's absence from United's squad for their midweek Europa League win at Sevilla is thought to have triggered the offer from the French giants. PSG are keen to avoid selling Neymar and will be asking United for €80m (£70.9m) for the France international. The arrival of Mkhitaryan to Old Trafford would add further competition to Pogba and the Red Devils could face another stiff test in finding the right replacement for the devastating winger.I have to say, Santa does a great job of shipping. My gift arrived at the excellent time of 3 am and it was well-packed. I opened it before bed and got to begin unwrapping without any struggle. I was greeted with a note from my Santa saying that it was late but I would still receive it in time for Christmas. Once opened, I found a very fine looking piece of art by an extremely talented artist. It was her most beautiful piece and I felt truly honored to be receiving it. I plan to hang it in my home, but for now I'm going to keep it close to my heart. As soon as I was finished looking at it I noticed my Santa had written an awesome card. She told me that she had a few pieces, and that I was a perfect candidate to receive one. I couldn't have hoped for anything better. I opened the second gift, which was also packaged very well and it was very much appreciated. As I have said a couple times already, I love anything Finnish. I plan to get a Book of Sticking (Suomi) eventually. I'm also excited that the card has a cute little Finnish saying on it, which is always a plus. Well, this was all too much. I want to start by saying thank you so much, Santa. You made

Transitions from Spontaneous to Neuronavigated Auditory Brainstem Implant Implantation: A Study of Technical Tips in Ears With Large Deformities. Spontaneous recovery of auditory brainstem implant (ABI) functions in patients with large middle and inner ear abnormalities seems to be rather poor, but an interesting new clinical approach could be the introduction of ABI based on neuronavigation. Hence, this study investigates whether transits between spontaneous and neuronavigated audiosurgical procedures for ABI implantation can be carried out in the same surgical session. Between 2012 and 2018, 43 patients (n = 43; 22 female) with severe sensorineural hearing loss were implanted with a standardized ABI system. Postoperative audiological test results and cone beam computed tomography (CBCT) were assessed. All patients completed the tests. In 16 cases, spontaneous and neuronavigated surgery were performed in the same surgical session, whereas 33 patients underwent spontaneous or neuronavigated surgery at different time points. Neither surgical implantation nor postoperative audiological test results differed significantly between both groups. In the spontaneous/neuronavigated group, surgery was successful in all cases. In the spontaneous/spontaneous group, 4 of 9 patients had difficulties to find the facial nerve. In the second group, 10 out of 22 patients faced difficulties in finding the facial nerve. Both

groups of patients needed comparable operating times. In most patients with large middle ear or cochleo-vestibular anomalies, CBCT-based neuronavigation revealed sufficient ear anatomy for successful ABI implantation. However, a significant number of patients in both groups needed repeated interventions or learning curves. The application of advanced neuronavigation did not show advantages in this setting.� moderate
