I picked up the printer to print the codes and have it send me back to the website to order it. But I didn't go there, I read all of the threads and I never saw anybody mention the use of the printer pdf documentation that comes with the printer on how to adjust the ink, so I find it hard to believe that you can adjust the ink level but it would be convenient if it did in the future. The printer comes with a manual that you can print out and you can read it on your own, and if you don't read the manual you would not know how to adjust the ink levels. I wouldn't expect a printed manual to be very helpful in adjusting the ink levels, and there are no instructions that I could find on the site, so that makes me think that you can't adjust the ink levels in the printer itself. Printing a printer pdf on how to use the printer pdf would probably be a lot easier than trying to understand the documentation that comes with the printer. I know that you can buy them online, but I was hoping that I could adjust the ink levels myself. A: Yes, you can do it. The first picture is what you actually want to do. As long as you have access to the ink chamber, you can remove it and adjust ink levels. For the other model: We don't have any service manuals online. You can print out the service manual and make the adjustment according to it. A: I own an Artisan 837 and I have found that it is actually relatively easy to adjust the print head of the printer if you do not mind ruining ink cartridges in the process (not that many of them are expensive but I still don't like the idea of throwing away ink). In my Artisan, the printer's head is located in a little compartment which is easily accessible by removing two screws at the back of the printer. What you need: A nut driver (I couldn't figure out how to do this without one, but I am glad I did as it is easier to do it with one) A spudger (the little yellow tools above the nut driver are not a satisfactory substitute) A screwdriver A needle nose pliers A regular screwdriver if you are willing to adjust more than one print head at once (a long screwdriver is perfect for this) An ink cartridge of the size you wish to use.
