download. The statements in this section merely provide background information related to the present disclosure and may not constitute prior art. A turbine engine may include a compressor section, a combustor section, and a turbine section. The compressor section pressurizes air entering the engine

---

and delivers it to the combustor section. The combustor section is where fuel is injected into the air and burned to generate hot combustion gases. The hot combustion gases are routed from the combustor section to the turbine section. The turbine section extracts energy from the hot combustion gases to power the compressor section and drive any output shaft(s) disposed in the turbine engine. The combustion and turbine sections are typically disposed in a single housing or casework. A typical combustion section may have a plurality of

---

combustors disposed about a central axis of the engine. Each combustor typically receives a fuel injector, which is operable to deliver a fuel/air mixture c6a93da74d
